

MiniCalc Library Manager 7.2

This utility program links and unlinks MiniCalc extension libraries. It **requires MiniCalc V7.2**, either registered or 30-day demo, for its normal work.

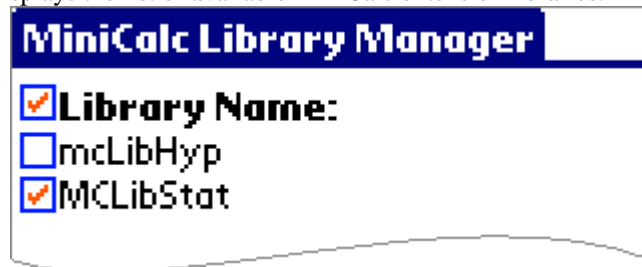

Note: If you have been using an earlier version of MiniCalc Library with MiniCalc Extension Pack, you must install **MiniCalc Library Manager 7.2** and the new extension libraries and run mcLibMan on your Palm. No need to make any changes in the library selection.

Installation:

mcLibMan.prc can be installed with Palm Install tool. MiniCalc Library Manager and/or extension libraries can be removed from handheld via App | Delete menu command on Palm main screen.

Usage:

Launch the program either from Palm Applications screen or using MiniCalc Options | Libraries menu command. MiniCalc Library Manager displays the list of available MiniCalc extension libraries:

Every checked library will be linked to MiniCalc and all its functions become available. The top checkbox allows selection/deselection all libraries with a single tap. Double-tap on a library name (or use Options | Details command) to display the list of library functions with their descriptions. Note that Library Manager modifies the list of MiniCalc functions, so they can be picked up while editing cell text.

Restrictions:

1. We recommend to refresh (Util | Refresh) all worksheets that use extension libraries every time when libraries get linked or unlinked. Cells using the functions implemented in a library that gets unlinked, result with #NAME? error.
2. Currently only four libraries can be linked at the same time.
3. Some extension functions crash on Palm OS 2 because of insufficient memory heap size. We do not recommend using extension libraries on Palm OS 2. We successfully tested MiniCalc extension libraries on all newer Palm OS versions.
